| Name of the Paper | : Introduction to Database Systems |
| Name of Course | : Generic Elective-II |
| Semester | : II |
| Duration of Examination | : Two Hours |
| Maximum Marks | : 75 Marks |

Instructions for Candidates:

1. Answer any **FOUR** questions out of **SIX**.
2. All questions carry equal marks.

Q1 Consider a MOVIE database in which data is recorded about the movie industry. Design an entity–relationship diagram for the movie database. List the strong and weak entity types in the ER diagram. List the names of all relationship types, type of participation on each participation of an entity type in a relationship type. Justify your choices. The data requirements are summarized as follows:

- Each movie is identified by title and year of release. Each movie has a length in minutes. Each has a production company, and each is classified under one or more genres (such as horror, action, drama, and so forth).
- Each movie has one or more directors and one or more actors appear in it. Each movie also has a plot outline. Finally, each movie has zero or more quotable quotes, each of which is spoken by a particular actor appearing in the movie.
- Actors are identified by name and date of birth and appear in one or more movies. Each actor has a role in the movie. Directors are also identified by name and date of birth and direct one or more movies. It is possible for a director to act in a movie (including one that he or she may also direct).
- Production companies are identified by name and each has an address. A production company produces one or more movies.

Q2 Suppose that we have the following requirements for a University database that is used to keep track of students' transcripts. Design a relational database schema for this database application. Show all the functional dependencies that should hold among the attributes. Normalize the database to the highest normal form possible explaining each step. Specify the key attributes of each intermediate/ resultant relation.

The university keeps track of each student's name (Sname), student number (Snum), University Enrollment number (UEn), current address (Sc_addr) and phone (Sc_phone), permanent address (Sp_addr) and phone (Sp_phone), birth date (Bdate), sex (Sex), class (Class) ('semester1', 'semester2', ... , 'semester6'), major department (Major_code), GE department (GE_code) (if any), and degree program (Prog) ('b.a.', 'b.s.', ... , 'ph.d.'). Both UEn and student number have unique values for each student. Each department is described by a name (Dname), department code (Dcode), office number (Doffice), office phone (Dphone), and college (Dcollege). Both name and code have unique values for each department. Each course has a course name (Cname), description (Cdesc), course number (Cnum), number of semester hours (Credit), level (Level), and offering department (Cdept). The course number is unique for each course. Each section has an instructor (Iname), semester (Semester), year (Year), course (Sec_course), and section number (Sec_num). The section number distinguishes different sections of the same course that are taught during the same semester/year; its values are 1, 2, 3, ... , up to the total number of sections taught during each semester. A grade record refers to a student (UEn), a particular section, and a grade (Grade).

- Q3 Consider the following relational database schema for an automobile company. Identify the primary and foreign keys. Suggest data types for all columns. Formulate the SQL queries for the following operations.

Schema

VEHICLE (SERIAL_NO, MODEL, MANUFACTURER, PRICE)

SALES (SALESPERSON_ID, SERIAL_NO, DATE, SALE_PRICE)

SALESPERSON (SALESPERSON_ID, NAME, PHONE)

Operations

- Insert a tuple <1001, 'Ramesh', 8743474778> in table SALESPERSON.
- Delete all tuples in VEHICLE table where manufacturer is 'HONDA'.
- Update the PHONE of salesperson whose name is 'Suresh' to 7884573575.
- Retrieve vehicle details for all sales that occur in year 2020.
- Display salesperson name(s) who made more than 5 sales.

- Q4 Consider the following Snapshot of a **Company** database. Keys and Null Constraints for columns in EMP and DEPT tables are mentioned below. Write Commands for table creation with given constraints. Write SQL Commands and resulting tuples for the queries that follow:

EMP. EMPNO (PRIMARY KEY, NOT NULL)

EMP. MGRNO (FOREIGN KEY refers EMP. EMPNO)

EMP. DEPTNO (FOREIGN KEY refers DEPT. DEPTNO, NOT NULL)

DEPT. DEPTNO (PRIMARY KEY, NOT NULL)

COMM (Default value: NULL)

EMP table

DEPT Table

| DEPTNO | DEPTNAME | LOC |
|--------|------------|-----------|
| 1 | ACCOUNTING | KOLKATA |
| 2 | RESEARCH | NEW DELHI |
| 3 | SALES | CHENNAI |
| 4 | OPERATIONS | MUMBAI |

1. Move all sales representatives to department 1 and set their commissions to 35% percent of their salaries.
2. Display department name, location, number of employees and the average salary for all employees department wise.
3. Display the employees that earn a salary that is higher than the salary of any of the Admin.
4. Display the employee name, number and salary along with their manager's name, manager's number and Salary.
5. Display Job, Employee Name, Dept Name sorted first by Dept Name (Alphabetically) and then Salary (Largest to Smallest).

Q5 Consider the **Company** database of question 4. Mention the number of tuples that will result in the cartesian product and how many of them will be spurious. Give example of two such tuples. How can we avoid spurious tuple generation while joining tables. Differentiate between Join and Union operation in relational database. Write the syntax and example of SQL queries for cross product, equi-join and Union operation.

Q6

What are data anomalies? How are these relevant to database design and normalization? Illustrate using the example application of MOVIE database described in question 1.

1. Perform four iterations of the Regula-Falsi method to obtain a root of the equation $f(x) = x \log_{10} x + 3$ correct to four decimal places in the interval (0,1).
2. Perform two iterations of Newton's method to solve the non-linear system of equations with initial approximation (1, 1)

$$f(x, y) = x^2 - y^2 - 4 = 0$$
$$g(x, y) = x^2 - y^2 - 16 = 0.$$

3. Solve the following system of linear equations

$$2x + 2y + z = 1$$
$$4x + 2y + 3z = 2$$
$$x + y + z = 3$$

using the Gauss elimination method with partial pivoting.

4. For the following data, construct Newton divided difference table:

| | | | | | | |
|--------|----|----|----|----|----|----|
| x | -2 | -1 | 0 | 1 | 3 | 4 |
| $f(x)$ | 9 | 16 | 17 | 18 | 44 | 81 |

Find the interpolating polynomial $f(x)$ and by using it approximate value of $f(x)$ at $x = 0.5$ and $x = 3.1$.

5. Find the approximate value of the integral

$$I = \int_0^{\pi} t \sin t \, dt$$

using Trapezoidal rule and Simpson's rule. Also calculate the error in each case.

6. Apply Mid-Point method to solve the initial value problem and calculate $y(0.3)$ by using $h = 0.1$

$$\frac{dy}{dx} = 3x + \frac{1}{2}y, \quad y(0) = 1.$$
