

Department of Human Development and Family Empowerment displayed the teaching aids made by the students in the college plaza in February 2017. It was indeed a memorable day for the students for they got an opportunity to show their innovative teaching aids. As part of their practical, students have to make puppets, masks, flashcards, conversation charts, board games, puzzles, mazes etc. . A number of workshops were held to guide them as to how to go about making age appropriate attractive learning materials.

The use of puppets helps the nursery teachers to enact the lesson plan. The puppets are used in such a way that it brings life to them, they become real life characters. This helps to attract the attention of children and teaching becomes more meaningful.

Masks of different animals example cat, mouse, lion, elephant were made. These masks were worn by the children in the class room. Then they were encouraged to enact like those characters. It was an enjoyable learning experience for them.

All the teaching aids used in nursery schools were found useful by the children. It was a good learning experience for the students. Some of the pictures are given below for you to enjoy
